

Terminology

- Course Generic instance of high level aggregation of learning products.
- Course Iteration Scheduled instance of a <u>Course</u> inherits attributes of the <u>Course</u> it was built from.
- ⇒ Lesson Template Generic instance of lowest level learning product overtly managed by the LMS.
- Lesson Scheduled instance of a <u>Lesson Template</u>
 inherits attributes of <u>Lesson Template</u> it was built from.

Course/Lesson Template: Course Manager

Course Iteration/Lesson: Class Manager/Scheduler

Module IV - Construct Course Iterations

These definitions of Courses and Lessons are important distinctions as they are worked by different Role Based Users for different actions in the training process.

The difference between a Course and a Course iteration is that the iteration has a location, date and time associated with it. The Course itself is just a model of what should be taught and what is needed to teach it. The iteration is that *instance* of a Course that is schedulable and for which Learner's can register.

The Lesson template and the Lesson have the same relationship as the Course/Course iteration. The Lesson, not the template, is fixed in time and place. Lessons have rosters of registered Learners—templates never do.

In the ALMS, there is a natural break in the duties of Role Based users. As CM/Scheds, we work with Course iterations and Lessons.

Terminology

- **⇒** Learning Offering Training Product (Lesson that is offered as an Iteration).
- Session An occurrence of a training event that links a Lesson with time/date and place.
- Section An instance of a Lesson scheduled at a specific date/time and place, but with its own unique roster of Learners.

Experience a Training Revolution!

Module IV - Construct Course Iterations

1st Bulllet: Lessons templates, Lessons, and Web-based Products are all training Products. When selecting these from the LMS database for use in building Courses and iterations, they will appear as choices under the heading of Learning Offering.

2nd Bullet: When working with Lessons, we will see exactly how sessions are used in the Lesson creation process. It is the session that places a Lesson at a specific date and time.

3rd Bullet: We use sections when a class is to be divided into subgroups. Class sections are independently schedulable. (For more academic situations, a section can be just another occurrence of the same class, such as a college Chemistry class that meets either Wednesday nights or Saturdays.)

How We Construct a Course Iteration

- Create Lesson Templates
- **○** Associate Resource requirements with Lesson Templates
- ⇒Build Course structure (add Phases, Modules, and Lesson Templates)
- Create Lessons from Templates
- **⇒**Build Course Iteration and add Lessons to Iteration
- **○** Associate Iteration to Course (from Course Details screen)

Experience a Training Revolution!

Module IV - Construct Course Iterations 6

As with Courses (templates), Course iterations are built from the bottom up, using Lesson iterations [and ad hoc events] as the basic building blocks. The following is a general procedure for creating Course iterations:

Note: Items in red were already discussed in a previous presentation Section 5.1. These are actions that Course Managers have already accomplished.

Class Managers of ATRRS Managed Course iterations should locate the Class administrative data in the LMS catalog before building lessons or will have to leave the completed lessons in storage until the Course iteration is established in the Catalog.

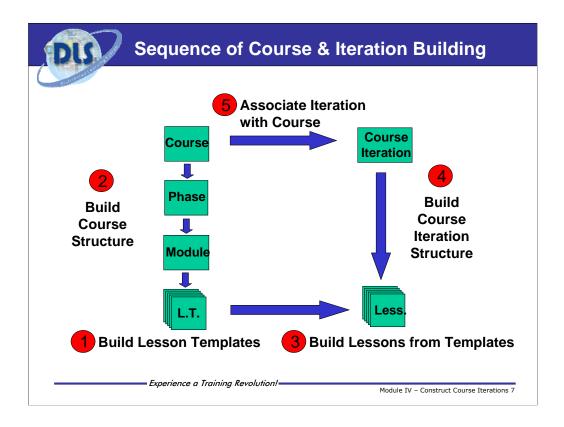

1st bullet: Creating "templates" includes all the associations, constraints, and additional information needed to perform training of Lessons based on the template. This was done by the Course Manager.

 2^{nd} bullet: Reminder: Resources were associated with templates and include Facilities, Equipment, Supplies (Expendables) & Instructors.

3rd bullet: We created or edited the Course administrative data (CAD), added a Phase or Phases, Module or Modules, then finally added the Lesson belonging with each Module.

Now, as CM/Schedulers, we will set them in place and time, make them applicable to some actual execution of training.

- **4th Bullet:** We use the Lesson templates created by the CoM to build schedulable Lessons- one Lesson for every template in the Course model.
- **5**th **Bullet:** Just as the CoM did while building the Course structure, the CM/Sched adds or edits the Course iteration administrative data, then "builds down" to add the Lessons he already created from the templates. Note that at the iteration level, there are no Phases or Modules used– just the Course iteration and its Lessons.
- **6**th **Bullet:** Last, the CM/Sched must go to the original Course Details screen and use the Course Iterations link in the left navigation bar to create the association between that Course and the iteration he has just built.

[Trainer: We are now going to go through the process of building a Course Iteration.]

This is the first step in a five step process. Course Managers learned about some of this in a previous Lesson.

Step 1: The CoM creates however many Lesson templates are needed for his Course.

This is the second step. The CoM establishes the Course in the catalog by adding Phases, Modules, and associating the Lesson templates as Learning Offerings under each Module.

Now it is turned over to CM/SCHED to create the iterations. If it is ATRRS managed you must wait until ATRRS establishes the iteration (A-4 Message).

In Step 3 we build lessons from lesson templates- one Lesson for every Lesson Template in the Course model.

In Step 4 we build Course iteration structure from Lessons as Learning Offerings. Note that there are no Phases and Modules at the iteration level.

In Step 5 we Associate Course Iterations with the Course. This is done from the original Course's Course Details screen.

Details Concerning Course Iterations

- **○** Course Managers work with the Course; Iterations get worked by Class Manager/Scheduler Roles.
- Course Managers work with Lesson Templates; Lessons get worked by Class Mgr/Sched Roles.
- Class Manager and Scheduler must have a plan on how the Course Iteration will be conducted.
 - Is there more than one Section needed?
 - Are required Resources managed in the ALMS?
 - Are there any planned events that must be scheduled around?
- CM/Sched should have Course Iteration execution strategy based on the Course.

Note: Every course iteration must have at least one Lesson or product to be saved. (These only take a minute or two to create).

Bullets 1, 2: These are just quick reminders. It is easy to get confused at times.

Bullet 3: The CM/Sched should be aware of any constraints to training or other factors that may influence the scheduling process.

Bullet 4: It is important that the CM/Sched know how the Course is to be executed. The Course structure in the LMS should tell him what he needs to know. When creating a detailed schedule of Lessons making up a Course iteration, the CM/Sched should lay out the Lessons in the order of the Course's templates, e.g. day 1 is this, day 2 is this, and day 3 is this, and so on until the entire schedule is completed.

Module IV – Construct Course Iterations 9

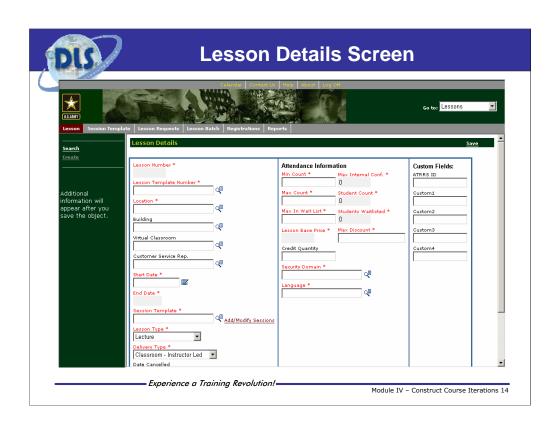

To build an iteration, we remind ourselves where we are in the process, picking up from the Course Manager at Step 3, building Lessons from Lesson templates- one Lesson for every template in the Course model.

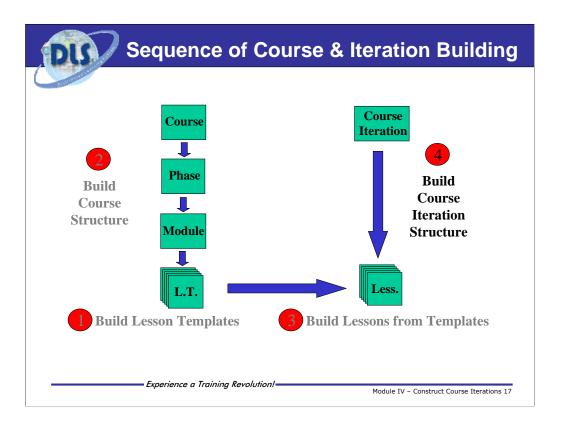

Construct Course Iteration PE

- **○**Class Manager PE # 1
 - Create Lesson
- **○**ALMS Training Database is located at: http://training.lms.army.mil

Module IV - Construct Course Iterations 16

We pick up with Step 4 in the diagram. We build Course iteration structure by adding Lessons as Learning Offerings.

Note that we reach down and get the Lessons that we built in step 3 to build the Iteration.

Note again that there are no Phases and Modules at the iteration level.

Steps To Building Lesson Iterations

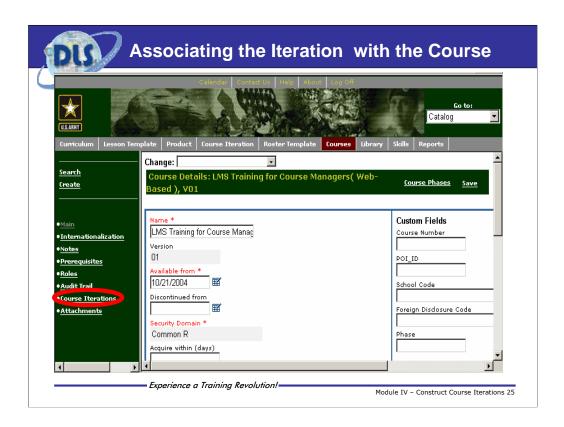

- Step 1: Click "Catalog", Click "Course Iterations" Tab, Click "Create" in the Left Navigation Bar
- **⇒** Step 2: Fill in your Course Iteration data
- Step 3: Click on "Course Iterations Lessons"
- Step 4: Click "Add New"
- **○** Step 5: Enter data in the Description Field
- Step 6: Click "Add New"
- Step 7: Select the Category and Product Group from the drop-down menu, and click "Go."
- Step 8: Select (check) ONE Learning Offering and click "Done."
- **⇒** Step 9: Click "Save" and then <u>Click "Back"</u>
- **⇒** Step 10: Repeat Steps 4-9 for every required lesson

Module IV - Construct Course Iterations 23

Having completed constructing the Course iteration, we must remember to associate the iteration with the original Course. This is done from the original Course's Course Details screen.

Having completed constructing the Course iteration, we must remember to associate the iteration with the original Course. This is done from the original Course's Course Details screen.

Steps To Associating Iterations to Courses

- Step 1: Click "Catalog", "Courses", "Search".
- Step 2: Enter search criteria and find the course the iteration is to be associated with.
- Step 3: Click the "Edit" icon.
- Step 4: Click "Course Iteration" link in the Left Navigation Bar.
- Step 5: Use the course iteration Finder to find the iteration just constructed and click "Add".

Course Iteration PE

Class Manager PE # 2 & 3

- PE 2 Create a Course Iteration (ALMS Managed)
- PE 3 Create a Course Iteration (ATRRS Managed)

○ALMS Training Database is located at:

http://training.lms.army.mil

Experience a Training Revolution!

odule IV - Construct Course Iterations 27

Take 20 minutes to do the Class Manager PE 2 &3.

In these PEs you will create a Course Iteration for both an LMS managed Course and an ATRRS Managed Course.

⇒ Business Case: Requirement for an admin Lesson after academic training Lessons are complete.

⊃For Example:

- GRADUATION
- PHYSICAL FITNESS TEST
- TURN IN OF EQUIPMENT

Experience a Training Revolution!

Module IV - Construct Course Iterations 28

Take 20 minutes to do the Class Manager PE 2 &3.

In these PEs you will create a Course Iteration for both an LMS managed Course and an ATRRS Managed Course.

Admin Requirements Business Process Steps

- Construct Course and Iteration as designed.
- Create an "extra" Lesson Template and Lesson.
 - Schedule it for after the last academic Lesson for any duration.
 - Schedule Class Manager (administrative gatekeeper) as Instructor for the Lesson.
- Class Manager does not mark last (administrative) Lesson "Delivered" until all required actions have been completed.

Experience a Training Revolution!

Module IV - Construct Course Iterations 29

You can create an "Extra" Lesson Template and Lesson to "schedule admin requirements"

Construct Course Iterations Summary

What We've Learned...

- **⇒**Terminology
- **⊃**Created a Lesson
- Create/Add/Modify Session Template
- **⇒**Built Course Iterations
- **○**Associate Iterations with Courses
